## Integration Manager

Our new Tek-ALERT® Integration Manager allows your facility to seamlessly integrate calls and activities from all of your systems and route those calls to the appropriate caregiver. By integrating hard-wired nurse call, wireless nurse/emergency call, fire alarm, security and access control systems, Tek-ALERT® Integration Manager provides you with a single point to manage staffing, patient safety and maintenance.

The core component of Tek-ALERT® is the Tek-BRIDGE®. This proprietary server was developed as part of TekTone®'s Tek-CARE® nurse call system, which is UL® 1069 listed and designed to rigorous life-safety standards. All events can be displayed on the Tek-BRIDGE® event monitor, a nurses' master station, and via a remote event monitor running on any networked PC in the facility.

**Event Response Times**

With the Tek-ALERT® Integration Manager, create activity reports for any connected system. Reports can be filtered by device, time and day, location and event type, and are easily exported to a spreadsheet. Administrative team members can create reports from any computer on your facility's network. Reports can also be created and emailed to selected recipients automatically.

# Staff Devices

Smart phones, wireless telephones, pagers and email output can be easily integrated with your facility's nurse call system to ensure that the right staff member receives the right event notification at the right time.
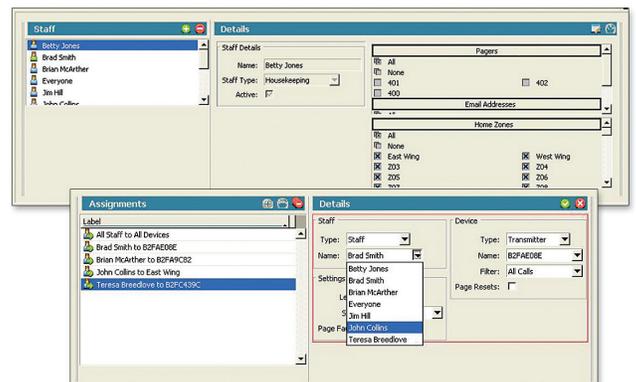

# Wireless Integration

With the Tek-ALERT® Integration Manager, your facility's nurse call system can support wireless devices such as pendant transmitters, motion detectors, and much more.

# User Interface

Easily assign devices to staff members using any TekTone® remote event monitor. Changes are instantaneous and very easy to implement. A unified, simple interface makes learning to use the system quick and straightforward.

# Integrate Your Existing Tek-CARE® NC110 Nurse Call System

Using the Tek-ALERT® integration manager, you can add advanced features to your existing Tek-CARE® NC110 system, such as:

- Management and reporting software
- Visual computer master station
- Multiple remote master stations installed on facility PCs
- Integration with smart phones, email and pagers
- Wireless integration to add pendants for patients and residents
- Integration with other systems, such as fire alarm and security systems

Integration is performed using existing wiring and infrastructure, allowing you the ability to add features—without disturbing patients or residents.

The Tek-BRIDGE® proprietary server runs the necessary software and provides communication ports to connect the Tek-CARE® NC110 and ancillary systems. The Tek-BRIDGE® features pleasant call tones, calls organized by call type, and an easy-to-navigate display. Reporting and staff assignments are accessible from the Tek-BRIDGE®.

Fresh New Look!

Optional new LED dome lights use existing wiring. They save your facility money by improving energy efficiency and eliminating costly bulb replacements.
